SHORT REFLECTION

Developing the web portfolio and hosting it on GitHub has been a good learning experience that has improved my ability to create. We built a portfolio with a clear intention around responsive design, with usability and accessibility in mind. The foundation of working with HTML, CSS, and Javascript embedded is further solidifying my skill development towards interactive features. My first experiences of working with GitHub have taught me about version control systems and habits of collaboration.

Being able to share this project on GitHub allowed me to develop a clean repository, a nice commit history, and good planning for updates. I learned a sense of documentation and to share projects with wider audiences. This exercise has allowed my technical knowledge to strengthen and confirmed a systematic and organized approach to web development.
